EDUCATION

York University

Toronto, ON

Bachelor of Science (Honours), Computer Science

Expected 2027

Relevant coursework: Introduction to Database Systems, Applied Linear Algebra, Elementary Probability, Design and Analysis of Algorithms, Software Design, User Interfaces

In progress: Big Data Systems, Database Management Systems, Building E-Commerce Systems, Advanced Data Structures, Human-Computer Interaction

Awards: York University Entrance Scholarship; Lassonde Entrance Scholarship; Best UI/UX Award, CS Hub Local Hack Day Hackathon (2023)

SKILLS

Data & Business Intelligence: Power BI (Desktop and Service), DAX, SQL, Excel (PivotTables, VLOOKUP, VBA), data validation, reconciliation, KPI reporting, data quality analysis

Platforms & Tools: Microsoft Fabric, Genesys Cloud, SAP, ServiceNow, Jira, Checkbox

Analysis & Delivery: Requirements gathering, business requirements documents, requirements traceability, process documentation, stakeholder coordination, QA and UAT support

Programming: Python, Java, TypeScript/React

WORK EXPERIENCE

HYDRO ONE

Markham, ON

Business/Data Analyst Co-op

May 2025 - Sep 2026

- Delivered six enhancements to an enterprise Power BI reporting suite of 27 operational and performance reports, working directly in 8–9 reports used daily by contact-centre managers and coaches
- Authored and modified DAX measures at the report level, resolving aggregation and filter-context requirements such as distinct-count metrics that recompute correctly across interval, day, week, and month views
- Built and tested changes in a non-production Microsoft Fabric workspace, supported QA cycles with business testers across multiple feedback rounds, and deployed approved changes to production through deployment pipelines
- Investigated and resolved data discrepancies across Power BI reports by analyzing measure logic, filter context, source tables, and semantic model relationships
- Led discovery for an enterprise survey platform migration: administered the survey platform including user accounts, permissions, and survey creation; completed a full inventory of 188 surveys covering ownership, structure, usage, and retention; ran stakeholder outreach across 12+ lines of business; and developed business requirements and traceability documentation
- Served as business analysis bridge between Hydro One and an external vendor on a ServiceNow Service Bridge integration, supporting cross-organizational requirements alignment across three organizations
- Automated weekly triage of 14,000-16,000 vulnerability records using Excel VBA, VLOOKUP, and CMDB enrichment, producing structured trackers for ownership assignment and follow-up
- Maintained a monthly Small Projects Financial Tracker by importing SAP actuals, reconciling discrepancies with PivotTables, and validating reporting outputs with finance stakeholders
- Configured Genesys Cloud speech and text analytics topics and phrase libraries, and authored process documentation for reporting, migration, and financial workflows to support knowledge transfer

PROJECTS

ApexAuto - Full-Stack Electric Vehicle Marketplace | React, TypeScript, Spring Boot

Jul 2026

- Established the visual direction and interactive prototype for a four-person e-commerce project, defining the design system, page structure, and core purchase flows
- Implemented React and TypeScript pages including the landing page and vehicle catalogue, with search, category filtering, price-range, and sort controls
- Diagnosed and resolved integration defects through end-to-end journey testing, including a category filter matching a field absent from the backend entity and a cart-creation endpoint returning no cart identifier to the frontend
